

IF A BOTTLE OF WINE HAS A TWIST-OFF CAP, IS IT OK TO STORE IT UPRIGHT?

Screwcaps don't need to be kept moist to remain effective, so yes, it's OK to store wine with a twist-off cap upright. But you should still follow the same general principles of good wine storage, including protecting the wine from light and vibration and keeping it at a steady, cool temperature.

WHAT WHITE WINES ARE CONSIDERED DRY?

Some whites wines are almost always made in a dry style: Sauvignon Blanc, Pinot Grigio, Spanish Albariños and Austrian Grüner Veltliners. Some wines often fall between dry and off-dry: many New World Chardonnays, Rieslings, Viogniers and Pinot Gris. And some whites are always sweet: Sauternes and "late-harvest" bottlings of grapes such as Riesling and Chenin Blanc.

IS IT CORRECT THAT WHEN SERVING WHITE WINES THEY SHOULD BE SERVED CHILLED, AND WHEN SERVING REDS THEY SHOULD BE SERVED AT ROOM TEMPERATURE?

Serving temperatures are really a matter of personal preference, but most people seem to like their whites chilled and their reds at room temperature.

More specifically, whites show their best anywhere from about 40 to 50 degrees F (the lighter-bodied whites at the colder end of the spectrum, the fuller-bodied whites at the warmer end).

For reds, you would typically want them warmer than cellar temperature, but still a bit cooler than most room temperatures—say, 60 to 65 degrees F.
